

About previous deadline:

Like predicted, final design doc was completed well ahead of time.

Described many unique design challenges and wrote how we addressed these challenges during the creation of the MVP.

About future deadline:

We planned to have many features done by this past Sunday, but the holidays prevented many of us from working on the project. As a result, we still have many features to implement, like the calendar.

Because we are a bit behind schedule, we plan to work every night of the rest of this week, especially over the weekend, to meet our goal.

We will still be able to implement the many features that we were intending to implement. Altogether, we have made the 16 significant changes as depicted in the “added features” spreadsheet.

The major change will be the database restructuring (adding lectures) and the creation of the calendar. We also plan to rework the views and the navigation.

We have shelved the feature that would give professors analytics beyond student attendance and accuracy. We realized that those analytics were much better when reported on a student-by-student basis.
